 Launch your AI Assistant in under 30 days

PuppeteerAI brings you patient-facing agents trained to handle real conversations, safely conducting clinical intake, triaging symptoms, managing bookings, and answering medical questions with clarity and care.

PuppeteerAI chats or calls your patients directly, no app downloads, no learning curves.

Have a specific use case in mind?

Request a custom demo based on your workflow, we'll have your AI assistant live in under a month.

Medical Q&A

Hi, I've had daily headaches for a week that don't go away with painkillers. What should I do?

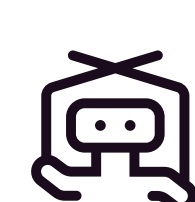

Any other symptoms like nausea or light sensitivity? On any regular meds? And how bad are the headaches on a 1-10 scale?

Yes, nausea and light sensitivity. I take lisinopril for blood pressure. Headaches are about a 7 out of 10.

Got it. Based on your symptoms and history, I'll escalate this to Dr. Smith, our neurologist.

Let's book an appointment—does Wednesday at 3 PM work?

That works. Is it common to get headaches while on blood pressure meds?

 PuppeteerAI

EHR Integrations

PuppeteerAI connects seamlessly to your EHR or client APIs to automatically sync data and deliver real-time updates, no extra logins, no double entries.

20/30 Check-ins completed

Full Patient Visibility

See the full picture. Measure what matters and support better care, faster decisions, and smarter follow-up.

Partner with PuppeteerAI and go live with AI in just 3 steps

01

Get in touch

We map your care workflows, identifying the moments where automation creates value.

02

Proof of concept

Our world-class team designs a prototype so you can see real conversations before going live.

03

Go live in 30 days

Launch your agent fully deployed, integrated, and ready to support patient conversations.

Beyond launch, **we stay with you as a true partner** — ensuring smooth performance, continuous optimization, and lasting impact.
